

# GUIDE TO RISK ASSESSMENT

This publication has been in existence since the 1990s and has now been revised in line with current developments in risk assessment; basically it follows the requirements of the 'Approved Code of Practice and Guidance L8 (2000) Legionnaires' Disease, the control of legionella bacteria in water systems' with the inclusion of recent guidance.

The loose leaf presentation with a durable cover has been produced with no commercial bias and covers the methodology of a legionellosis risk assessment, advice on carrying out condition surveys on a range of relevant equipment and includes useful Appendices on: hazards and risks in the workplace; WMSoc guidance on competence; condition survey checklists; and flowcharts.

The format will allow addition of further sections as appropriate, and the document is compatible with the WMSoc Site Log Book for Water Services

**Price per single copy:**

Member of Water Management Society = £ 50.00 (plus VAT) Non-member = £ 75.00 (plus VAT)  
(all prices above include postage and packing)
